BV5000

3D Mechanical Scanning Sonar

BlueView's BV5000-1350 3D mechanical scanning sonar creates high resolution imagery of underwater areas, structures, and objects. With the touch of a button, the 3D mechanical scanning sonar creates 3D point clouds of an underwater scene with minimal training required. These compact, lightweight units are easily deployed on a tripod or an ROV. The scanning sonar head and integrated mechanical pan and tilt mechanism generate both sector scans and spherical scan data. For the first time, get 3D laser-like scanning capabilities underwater, even in low and zero visibility conditions and seamless integration with traditional laser scan imagery.
Applications:

- 3D site survey
- 3D structure inspection
- Rig decommissioning
- Bridge inspections
- Underwater metrology
